SUPERLIGHT SOCCER CATEGORY

This category has been conceived of as preparatory to the RoboCupJunior official soccer leagues. In order to facilitate the approach to the official discipline, some restrictions on the official regulation have been introduced.

This regulation is valid for Italian competitions. It is not intended for international qualification and does not replace the official Soccer Open and Lightweight categories.

The Superlight category refers to the Soccer Lightweight, whose regulation can be found on the official website:

<http://rcj.robocup.org/soccer.html>

The following additional rules are applied to the aforementioned category:

- the maximum number of **traction motors allowed is two***
- the maximum weight of the robot is **900g***
- max power supply of **7.4V** (according to the nominal voltage indicated on the package)*
- the robots can exit the white line without any penalty*
- those team members who have already participated in national or international competitions in the Soccer Open and Lightweight categories are not allowed to take part into this category.*
